

XMaLpha Technologies Selected to Manage the Oregon Bill Drafting System Project

"GOT META-DATA?"[®]

FOR IMMEDIATE RELEASE:

Shoreview, MN – XMaLpha Technologies (<http://XMaLpha.com>) has been awarded a contract to provide consulting services, technical, project management, facilitation, mentoring and knowledge transfer expertise for the Oregon Legislature's Technology Transition Program. Commenting on the announcement, Devan Shepherd, CEO and Chief Technical Officer of XMaLpha, stated, "Designing a replacement to legacy Bill Drafting technology in the Legislative domain, is a complex and highly specialized task. While each State's business rules, procedures and conventions are unique, XMaLpha can draw on its experience, lessons-learned, and best-practices to ease the transition into a new solution." In addition to overall project management, XMaLpha will offer general consulting, assist with the construction of structural data models, and help the State of Oregon Team to design its next generation of Legislative drafting tools.

No two Legislatures are completely alike. However, there are significant similarities, common areas of focus, shared workflow considerations, timing pressures, and accuracy demands. The study of these components in various Legislative systems has facilitated the creation by XMaLpha of a comprehensive list of "lessons learned." To specifically address this unique market, with its sophisticated automation requirements, XMaLpha employs a proprietary methodology known as XMaLpha Legislative Solutions™. This methodology facilitates the creation of new architecture designs, and the application of consistent, affordable, and effective standards-based development in the Legislative environment.
